

**FOR IMMEDIATE RELEASE**  
**04/29/11**

**Haliburton International Foods Partners With Buhler Sortex Inc.**

ONTARIO, CA – April 29, 2011 – Haliburton International Foods, Inc., a leading manufacturer of food products recently installed a Buhler Sortex E Optical Sorter. Defect and foreign material detection and elimination are key elements of any product quality and food safety system. Metal detectors and most recently X-ray systems do a good job of eliminating many foreign materials, but do little for finding color or size defects and contamination from plastic, wood, rock and cardboard.

Buhler's Sortex E Optical Sorter with integrated SmartEject™ system takes defect detection and elimination to the next level. By combining enhanced InGaAs technology, bichromatic cameras and shape recognition, the Sortex E can detect the subtlest product defect and foreign material. The first Sortex E unit was installed on our IQF roasted vegetable blending and packaging line in April. Starting in May, in addition to X-ray inspection of all sealed bags, we will offer optical sorting of all IQF vegetable blends. Now that's Best-in-Class.
